## About Splyt

Splyt is the leading global network for mobility and lifestyle services. Our technology integrates ridehailing, airport transfers, micromobility, public transport and food delivery into our partners' platforms, so they can unlock the world for their customers. Splyt has offices in London, Singapore, Tokyo, and Kuala Lumpur, but we feel at home, anywhere. Our amazing partners are the largest in the business, with over 2 billion users in total, and we are constantly expanding our footprint beyond the 150 countries we already cover.

## Working with us

We are a fun, diverse and enthusiastic bunch from all corners of the world (with 17 nationalities and 20 languages spoken amongst our employees). We live and breathe our values of Ingenuity, Independence, Collaboration, and Laughter. Our exceptional culture is underpinned by an empowering, collaborative learning environment where our people are constantly stretched and growing to be high-performing and, most importantly, happy.

Splyt teams are small, autonomous squads. This allows every team member to contribute to the team vision. Our technical arsenal is diverse, however we develop exclusively in TypeScript as we value cross-team collaboration.

The Widget Asia team is a group of talented and passionate engineers that have built some of our most significant customer-facing products (serving several million users), whilst also playing a key role in engineering the systems that make up Splyt. We are now on the hunt for an experienced Developer based in Kuala Lumpur to shine in our amazing Asia team. This role will report directly to the team Engineering Manager.

## The role

At Splyt we prefer to craft the role to the candidate; you will define what area of the stack you work on, whether you're a React maestro, a Node.js specialist, or somewhere in between. As a Splyt Developer you will be involved in the design and development of high-performance TypeScript applications and superb user experiences.

Our "widget" products are designed to leverage Splyt's lifestyle services and deliver them directly to the end user. Some notable projects include applications built for the Alipay and Grab super app platforms. In addition to building these bespoke experiences, you will also get the opportunity to contribute to various other services, tools and apps that make up the Splyt technology ecosystem.

As part of our team, you will evangelise Splyt's mission, culture, and values whilst being technically hands on in building the world's leading lifestyle marketplace.

## What you'll be doing

- Design, build and enhance new functionalities for our mobility marketplace and supporting projects
- Work independently on projects and deliverables, providing support to other members of the team when necessary
- Become an integral part of our growing start-up by contributing both on a technical and personal level
- Keep up to date with the latest technologies through training and professional development

## We expect all developers to

- Be comfortable working with TypeScript
- Have a firm understanding of object oriented programming and functional programming as well as common designs / anti-patterns
- Be familiar with current development methodologies (eg. Scrum, Agile)

## To work on our frontends, we are looking for

- Minimum 3 years commercial React experience
- Experience working with React Hooks
- Practical knowledge of state machines.
- Background working with and integrating REST APIs

## To work on our backends, we are looking for

- Minimum 3 years commercial Node.js experience
- Ability to design REST APIs
- Background in building scalable cloud-based solutions
- Strong knowledge of MongoDB

## It would also be great if you had knowledge/experience with

- Docker workflows
- Kubernetes
- Cloud platforms such as GCP or AWS
- Participation in open source projects

## What we can offer you:

- Competitive salary
- Daily lunch allowance of 35 MYR through FoodPanda
- Flexible working
- Annual holiday allowance of 12 days + 11 public holidays + 1 day for your birthday + 1 day per year of full service
- Annual training allowance
- Employee option scheme
- Private healthcare
- Fun, regular team events

## Working at Splyt

Splyt is a hub of ambition. We are driven by an eagerness to grow, and to leave a lasting and meaningful impact on the world around us.

Innovation at Splyt means finding new ways to do more of what we love. This means we think fast, work smart, laugh often, learn from the lows and celebrate the highs. We support and motivate each other in order to influence change that we truly believe in.

Though we are a diverse team from around the globe, we're unified in our mission to transform mobility into an integrated and connected experience for people all over the world. We won't stop until we get there.

**Sound like fun? Come join us - we're hiring!**

## About Splyt

Most of us make journeys every day – whether we walk, cycle, hail a ride or catch a bus or train. But when we leave our home towns and familiar areas to travel abroad, working out how to make short trips in unfamiliar places can be difficult.

Splyt exists to make those journeys easy; whether it's an airport transfer, the trip between the rail station and hotel or a way of exploring a new city. Splyt's technology integrates local smart mobility – from ride-hailing to bike share – in the apps travellers already use. So people who trust a global platform or their familiar transport app can see local travel and transport options wherever they are.

We developed a suite of tools to enable simple, seamless integration of our global mobility network. Our integration is supported by a single contract, streamlined payments and a global, multilingual customer support team.

Splyt can help you keep your customers – wherever they travel.
